## WebGIS-Anwendung AUSWERTUNG WERKE

### Funktional

- Listenansichten zu verschiedenen Objekten eines Versorgungsmedium
- Auswertung nach Objektarten (z.B. Hydranten, Leitungen, Kontrollschächten, Verteilkabinen,...)
- Darstellung der Sachdaten im Report
- Show-on-Map Funktion zur Anzeige im Kartenfenster
- Exportmöglichkeit nach Excel
- Filtermöglichkeit nach Attributen

### Für Sie

Listen Sie die Objekte übersichtlich auf, die für Sie relevant sind und verwenden Sie die Daten in Excel weiter für Ihre Auswertungen.  
Erstellen Sie periodische Statistiken über Ihre Anlagen. Verschaffen Sie sich eine Übersicht über zukünftige Aufgaben bei der Bewirtschaftung Ihrer Infrastruktur.

### „Ihr Inventar unter Ihrer Kontrolle“

Die Anwendung *Auswertung Werke* bietet die Möglichkeit, verschiedene statistische Auswertungen der Werkleitungskataster zu erstellen. Dies kann zum Beispiel die Länge der Leitungen sein, aufgeteilt nach Baujahr und Spannung. Des Weiteren können Listen erfasster Objekte, wie beispielsweise der Kandelaber, mit ihren Attributen erstellt werden.
